

LUDLOW PHOTOGRAPHY CLUB

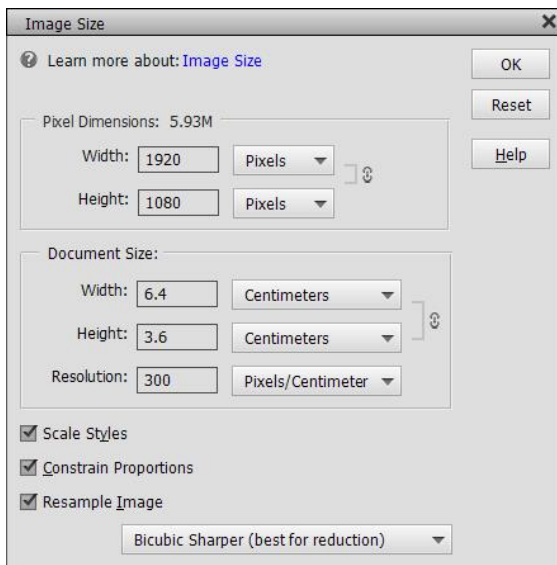

PREPARATION OF PROJECTED IMAGES FOR OUR PROJECTOR

There are three definite steps which will prepare your images to their best advantage for our particular projector.

1. Go “Image”, “Convert Color Profile”, set the profile to sRGB, if not already set.

2. “Image”, “Resize”, “Image Size”, starting from the bottom,”Bicubic Sharper”, “Resolution” - 300, “Height” - 1080, and check the width is no more than 1920.

3. When saving your .jpg file, just call it “*Name of file.jpg*” - and reduce it to 10 as below, before clicking “OK”.
